Dear Hiring Manager,

I am writing to express my strong interest in the Software Engineer role at Goldman Sachs. With a BTECH in Artificial Intelligence and Data Science from DY Patil College of Engineering and several internships in web development and software design, I have honed a diverse set of skills that are directly relevant to this position. My experience working on various projects has equipped me with a solid foundation in programming languages, problem-solving abilities, and teamwork—all essential qualities for contributing effectively to your team.

These positions allowed me to deepen my understanding of front-end and back-end technologies while also developing my ability to adapt quickly to new challenges. I am looking to make the next step in my career by leveraging my software development skills to contribute innovative solutions at Goldman Sachs.

my work as a Web Development Intern at The Latest Buzz further developed my technical skills while allowing me to work on real-world projects under tight deadlines. One key project involved creating an interactive blog platform where I integrated features that allowed users to customize their reading preferences. This not only improved engagement but also taught me how data can be leveraged effectively within applications—an important aspect for any tech-driven organization like Goldman Sachs. The ability to analyze user feedback and implement changes rapidly reinforced the importance of agility in software development processes.

I am very excited about the opportunity to discuss how my background, skills, and enthusiasms align with the goals of Goldman Sachs. I am eager to bring value through innovative solutions and contribute positively within your esteemed team.

Thank you for considering my application. I look forward to discussing how I can be an asset to your organization.

Sincerely,

Siddhant Rathi
